Date: 08.09.2021

Invitation of Public Comments

Sub: Request for ROW Permission for Execution of the Sleemanabad Carrier Canal Tunnel (Bargi Right Bank Canal) of Bargi Diversion project from RD 104 Km to RD 129 Km on Turn-Key Basis commissioning and testing of the canal system through TBM.

Ref: 1. PD, PIU-Jabalpur letter no. NHAI/PIU-JBP/NH-30/**P-2/Canal Permission**/ND Devision-05/17693 dated 06.09.2021
2. Executive Engineer, ND Division No.5 Katni letter No. 894 dated 06-09-2021-
3. PIU office letter No. NHAI/PIU/JBP/NH-30/P-12/Slimnabad Canal Crossing/2021/16213 dated 12.01.2021
4. PIU office letter No. NHAI/PIU/Katni/NH-7/P-2/File L&T/2019 /2665 dated 07.03.2020.
5. Executive Engineer, NDD Katni, ज्ञाप क्र.179 / कार्य-3 / रेल-एन.एच / क-5 दिनांक 28-01-2018
6. MoRT&H Circular No. RW/NH-33044/29/2015/S&R (R), dated 22.11.2016.

The Project Director, PIU-Jabalpur NHAI vide their letter dated 06.09.2021 has submitted the Proposal for ROW Permission for Execution of the Sleemanabad Carrier Canal Tunnel (Bargi Right Bank Canal) of Bargi Diversion project from RD 104 Km to RD 129 Km on Turn-Key Basis commissioning and testing of the canal system through TBM.

2. As per Ministry vide OM No. RW/NH-33044/29/2015/S&R (R) dated 22.11.2016, the Highways Administrator will make available the proposal seeking permission for utility laying for public comments for **30 days** on ground of public interest.

3. In view of the above the comments of public are invited on captioned proposal (copy of application is enclosed) and the same should reach to below mentioned address till **07.10.2021** beyond which no comments will be considered.

The Highway Administrator
O/o Regional Officer,
National Highways Authority of India
E-2/167, Arera Colony,
Near Habibganj Railway Station,
Bhopal (MP)-462016
E-mail ID:robhopal@nhai.org

4. This issues with the approval of Highways Administrator Cum Regional Officer, NHAI, Bhopal (MP).

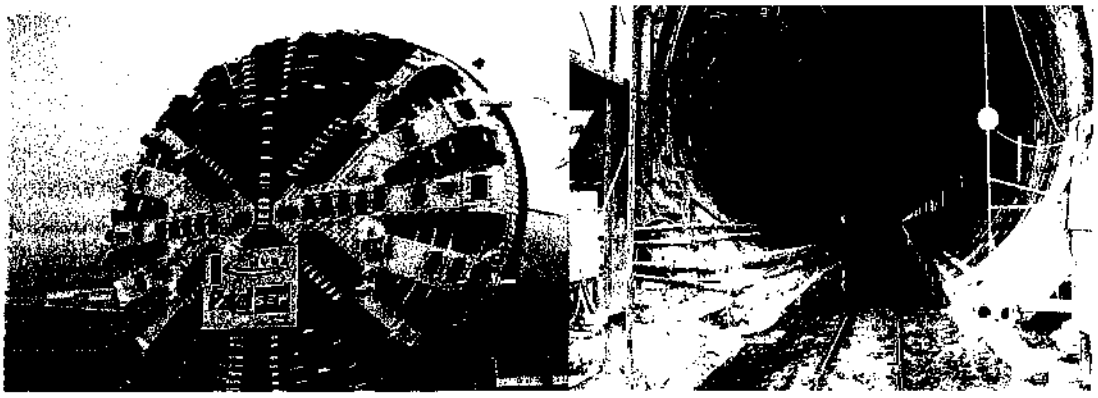
Methodology of the Geotechnical Instrumentation and Monitoring for NH-30 Crossing.

PROJECT	SLEEMNABAD CARRIER CANAL PROJECT
EMPLOYER	NARMADA VALLEY DEVELOPMENT AUTHORITHY
CONTRACTOR	PATEL - SEW - JOINT VENTURE

PROJECT-: Execution of Sleemnabad Carrier Canal (Bargi Right Bank Canal) of Bargi Diversion from RD 104.00 to RD 129.00 KM on Turnkey Basis.



PATEL SEW

Table of Contents

1. INTRODUCTION: -

Geotechnical Instrumentation and Monitoring (I&M) plan is required to be undertaken before during and after the construction of Sleemnabad Carrier Canal Tunnel Project of NVDA for the protection of all assets including NH-30 Crossing, structures, Buildings, and utilities within the influence zone of the project. The performance of the ground support, the stability of the tunnel excavation and the surrounding ground should be monitored at each stage of construction.

NVDA has proposed a tunnel of about 12 km length and 10 meter dia to cross of the ridge portion between R.D.104.00 to 116.00km, existing railway line & NH-7& NH-30. Tunneling we are doing by **EARTH PRESSURE BALLANCED TUNNEL BORING MACHINE (EPB TBM).** Our TBM will go from 18.50m below ground level in NH-30. In this zone, TBM will go into full EPB mode.

2. PURPOSE:-

Safety of Roads, Highways, Bridges, & buildings

To provide early warning through regular or continuous monitoring for any Surface/ ground and underground movements affecting the adjoining premises, roads, Bridge structure and utilities like power lines, water lines etc. within the zone of influence of construction. This implementation of preventive remedial actions well within time.

3. METHODOLOGY

A. Settlement Monitoring Point

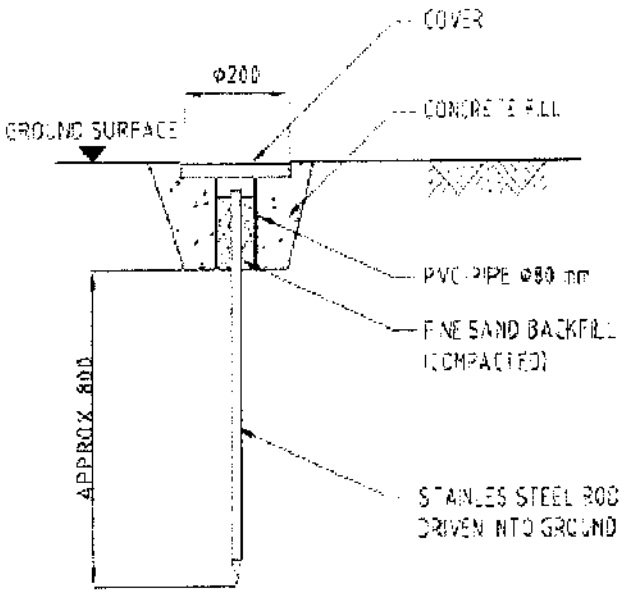
Surface settlement monitoring points (SMP) shall be installed around the excavations and above the tunnel alignments to monitor ground surface settlements induced due to construction activities.

Two types of SMP shall be used depending on the ground conditions.

One for hard pavement and another for soil.

➢ Settlement Monitoring Point for Soil :-

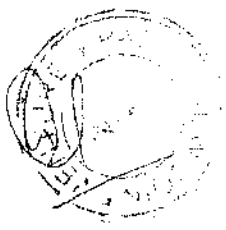
Settlement monitoring point for soil comprises of a steel survey pin having a hemi-spherical top with a red colored cross mark, MS extension rod approx. 1 m long 16 mm dia., an outer protective PVC pipe having 48 mm o.d. and 37 mm i.d and a MS grouting plate (150 mm dia. x 5 mm). A cover is supplied with each point to protect the top.



Settlement monitoring point for soil installation scheme

Installation

- Make a pit 1075 mm deep and 500 mm x 500 mm square at the top. In case hard rock is encountered at a shallower depth than 1 m, installation depth can be reduced accordingly.
- Pour a little concrete (1:2:4; cement: sand: gravel) at the bottom of the pit to make a resting pad for the grouting plate. Place the assembly comprising of, extension rod, outer PVC pipe and SS survey pin with grouting plate at the bottom of the pit.



- Backfill the void around the outer pipe and pit with excavated material. Compact while backfilling.
- Fill the annular space between the extension rod and outer PVC pipe with dry sand.
- Use necessary shuttering to make a 75 mm deep niche at the top. Grout 250 mm x 250 mm lockable cover on top of the niche to protect the installation. Keep the cover locked when not in use.

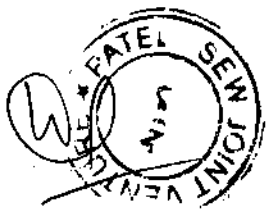
Taking Reading

- Unlock hinged protective cover (In case of settlement marker in soil) with the special key provided. Clean survey pin.
- Elevation of the settlement points will be measured using a digital level optical survey team.
- Precise levelling survey method will be used. Permanent approved benchmarks for the survey works will used for reference. Temporary benchmarks closer to site will be established by survey team.
- Base reading/ initial reading will be established after taking 3 initial readings consecutively.
- To determine settlement, compare subsequent readings with base reading as reference.

➢ Bi-reflex Target: -

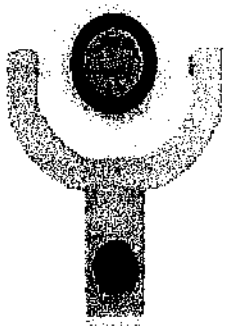
General Description:-

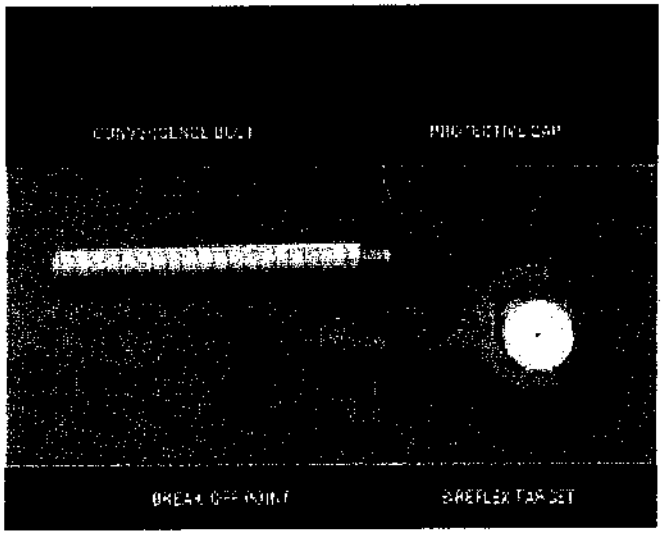
Bireflex target consists of reflector mounted on a robust frame. The target has reflectors on both the sides and is mounted on a universal joint such that it can be oriented in any direction as required. The target has a small center hole to allow precise targeting. The



target interchangeable is made of high performance materials and precise manufacturing processes.

The target components include convergence bolts with protective cap and adaptor with reference break-off point. The break-off point adaptor is required to mount the target on the convergence bolts.





Installation and Readings

Install the 12 mm diameter, 150 mm convergence bolt perpendicular to the surface of the structure by means of drilling and grouting or by grouting only as suitable. Ensure that the red PVC protective cap is secure over the threaded end of the bolt which remains outside. Ensure that sufficient clearance is there between the capped threaded end and the surrounding material to enable easy mounting of bireflex target

- After the stud is set, remove the PVC protective cap and install the break off point. Finally, install the bireflex target over the breakoff point and secure in its final position by means of tightening of the clamp screw.
- Take initial reading with a total station, establish base reading after taking 3 initial Readings consecutively.

- To determine deformation, compare subsequent readings with base reading as reference.

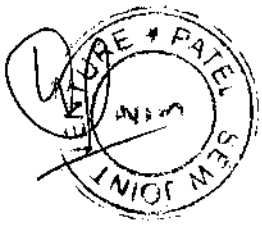
➢ Crack Meter :-

Crack meter shall be used to monitor change in width of existing cracks in critical buildings, located within zone of influence of Sleemnabad Project. Locations of crack meters will be decided after visual inspection of cracks. Crack meter consists of a graduated scale with a resolution of 0.5 mm and a transparent acrylic plate with a hairline cursor mark. The graduated scale and the transparent acrylic plate are assembled across the crack with impact anchor in 5 mm diameter holes drilled to a depth of 30 mm .As the crack opens or closes, the graduated scale and the cursor move relative to each other representing the amount of movement occurring. The reading of the marking is initially noted and is taken as a base. Subsequent readings are then compared with the initial reading to determine the change in the width of the crack.

NOTE: In case crack width is larger, a crack gage with 100 mm marking instead of 50 mm marking will be used.

Installation

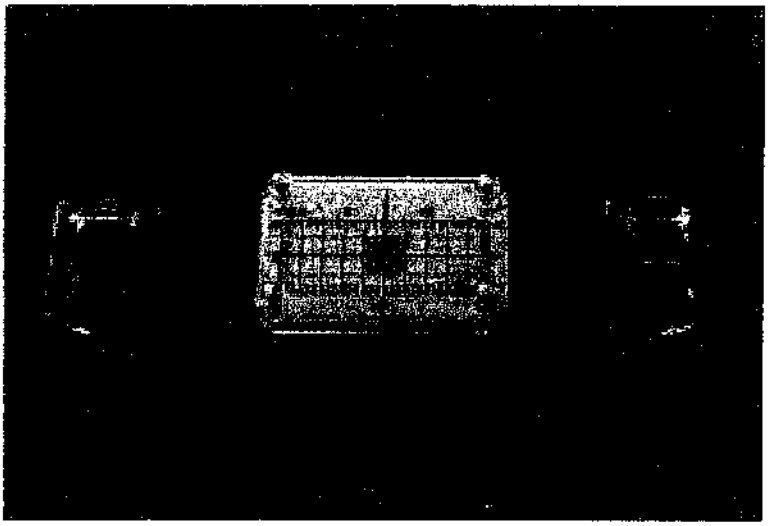
- Drill two 5 mm diameter, 30 mm deep holes on each side of the crack along a line perpendicular to the direction of crack, using drilling template Take care that the holes are drilled perpendicular to the surface of the wall. Clean the holes with a handheld air pump.



- Insert the expandable anchors through the holes provided in the graduated scale.
- Now push the expandable anchors inside the respective drilled holes upto the end.
- Place the screw over the expandable anchors and manually tighten them with the help suitable screwdriver.
- Insert the expandable anchors through the holes provided in the transparent acrylic plate. Now push the expandable anchors inside the respective drilled holes up to the end. Place the screw over the expandable anchor and manually tighten with the help of suitable screwdriver.

Taking Reading

- Note the initial reading as shown by the marker on the acrylic plate. This reading is taken as the base. Also note the ambient temperature.
- Subsequent readings are then compared with the initial reading to determine the change in the width of the crack.



Crack Monitor

4. SAFETY

- All risks are evaluated prior to any works commencing, utilizing the matrices to Determine the level of significance in terms of likelihood of occurrence and severity of Hazard based on the allocated numerical values.

Personal Protective Equipment (PPE) Requirements

All personnel involved in any of the JV's operations are to wear the following PPE:

- Safety Vest
- Safety Helmet
- Safety Footwear
- Eye Protection
- Safety Gloves (Task Dependent)
- Ear Protection (Where Necessary)
- Dust Mask

First Aid Facilities

A trained first aider will be available at each station location and will be made known to all associated with the project through the site induction. A first aid kit and eye wash station will be available on site and will be placed within the welfare facility and will be clearly marked.

Thank You

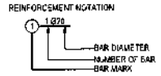
IMPORTANT NOTES :

1. THIS DRAWING IS APPLICABLE FROM CHAINAGE 111.535 (U/S OF NH30) TO CHAINAGE 111.600 (D/S OF NH 30) OF THE TUNNEL.
2. DURING EXECUTION OF TUNNEL BENEATH THE HIGHWAY & ONE MONTH THEREAFTER, REAL TIME MONITORING OF DEFORMATION OF THE HIGHWAY SHALL BE CARRIED OUT. DEFORMATION MONITORING INSTRUMENTS SHALL BE KEPT ON EACH SIDE OF THE ROAD @5mtrs ALTERNATIVELY AT LEAST UP TO 30m ON EACH SIDE OF TUNNEL. HIGHWAY SHALL IMMEDIATELY BE RESTORED TO ORIGINAL POSITION IF OBSERVED DEFORMATION IS MORE THAN 10mm. IF REQUIRED ADEQUATE GROUND IMPROVEMENT MEASURES SHALL BE IMPLEMENTED ON RECOMMENDATION FROM GEOLOGIST AND ENGINEER-IN-CHARGE IN CASE DEFORMATION IS MORE THAN 10mm.

NOTES :

1. REINFORCEMENT NOTATION



2. ALL DIMENSIONS ARE IN MILLIMETERS UNLESS NOTED OTHERWISE.
3. CONCRETE SHALL BE OF GRADE M50 A20 CONFORMING TO (IS 456 2000)
4. REINFORCEMENT SHALL BE OF GRADE FE500 CONFORMING TO (IS 1786)
5. ALL OTHER NOTES MENTIONED IN EARLIER GOOD FOR CONSTRUCTION DRAWING (SEE REFERENCE DRAWING) SHALL BE VALID FOR THIS DRAWING.
